

Welcome to the Argon K3Pro® Advantage...

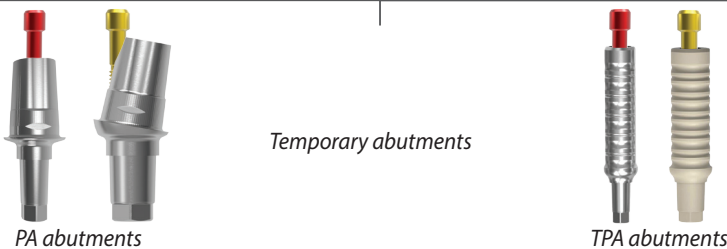

The K3Pro® implant system has a unique conical press-fit connection. The K3Pro® implant system connects the implant and the abutment with a 1.5° (total 3°) Morse taper, this gives an optimal load displacement from the abutment to the implant.

The Morse 1.5° taper connection also offers a bacterial seal which is free from micro-movement and micro-gaps. This results in an implant that maintains bone height, tissue health and long term stability.

Custom Abutments

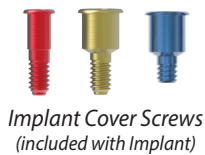

Temporary abutments

Implant Analogs

Implant Cover Screws (included with Implant)

Custom Tissue Formers
